Positronic Fluids

Positronic Fluids

In ancient times, the subtle radiance of all living organisms was recognized as sacred knowledge among the Atlantean Sons of the Law of One. Ayurveda prescribes barefoot lifestyles at pyramids and temple sites in conjunction with drinking Soma: 'elixir of immortality'. Soma kindles *'The Fire of Life'* within the human body, enhancing biophoton emission from resonant transmutation reactions that illuminate our blood and skin.¹

In contravention of Creational Law, immoral ET races now seeking dominion over Earth have weaponized this sacred biophysical knowledge. Synchronous information shared by UFO contactees in Switzerland and Mexico support the contentions of the Siberian sage Anastasia concerning a devious invasion plan being executed by a malevolent ET race possessing high technological capabilities. Information from these 3 high-level sources confirms this aggressive ET race has developed sophisticated weapons that can control masses of Earthly human beings *by subjecting them to the radiations of concentrated negative thoughts*.

Plejaren beamship
Eduard 'Billy' Meier

Swiss UFO contactee Eduard Meier² published significant information regarding the off-world origin of a high-tech species of nefarious humanoids operating from a large UFO base hidden within a subterranean city below the Orion Pyramid Complex at Giza, Egypt. Meier gives an excellent account of his covert visit to the subterranean city undertaken on February 3, 1956 with his ET guide Asket, of the Timar civilization:

But now she explained to me that she was attaching a small device to my belt, so we would also continue to remain invisible after we left the ship... Suddenly Asket grasped me by the hand and led me to a small entrance, opening to the pyramid. Through long, musty passageways, we walked in twilight through the interior of the pyramid. Then it was so dark that I could not recognize anything more. I wondered about the fact that I did not collide with anything and that Asket found the way in spite of this... [complete] darkness.

We walked in that manner for a long time and I felt that we climbed down somewhere on various occasions. Then suddenly a very weak light was discernable precisely as if the first light of dawn entered, yet I was not able to fathom the source of this twilight. Now we stood before an enormous, squared stone, somewhere deep in the pyramid. Right before my eyes, suddenly the gigantic ashlar simply dissolved into nothing. And already Asket pulled me over the position where, just a few seconds before, the giant ashlar had been completely joined with other squared stones.

Mandelbrot set [$z_{n+1} = z_n^2 + c$]

A steeply descending passageway, which was guarded by two oddly clothed men, opened behind the ashlar which had just now vanished. And as I threw back a glance as I walked down the passageway, I could not help but ascertain that the squared stone, which had just disappeared, was again precisely as visible and completely joined as just shortly before, when I saw it for the first time from the other side.

As I made this assessment, Asket's "voice" whispered in my consciousness that I should be mute and not try to speak because we were in a place which was not constructed by her race and it additionally would not be even slightly useful if we were to be identified here and uncovered by the guards. The guards we saw are members of, or are related to, a power-conscious, extraterrestrial group, who, through certain impure means, force a majority of Earth humanity under their control, in order to bring the entire Earth under their control.

Spherical gravity motors
Mandelbrot configuration
Plejaren beamship

So then I became silent and mutely followed my leader past the two guards, who took no initiative at all against us. Quite obviously they could not see us, and it seemed to me as if, for the two of them, Asket and I simply did not exist. It was a funny situation for me to which I simply could not so quickly accustom myself in spite of the previous experiences. It was simply something completely new and unusual for me.

The passage, which was furnished throughout with steps, led steeply and deeply down into the pyramid –deeper and deeper it went down, and then, suddenly, we stood in a gigantic hall which seemed to overflow with light coming from everywhere and nowhere. The hall was giant sized, as was the gigantic disc-shaped spaceship which rested here next to various smaller ships in the middle of this hall, deep below the surface of the Earth.

A giant spaceship deep below the foundation walls of the Pyramid of Giza. I actually believed I was dreaming. I pinched myself on the ears, once, twice, three times. I felt the pain and I pressed my fingernails into my ears. The pain intensively reinforced itself. It actually was not a dream. Here, resting deep below the Pyramid of Giza, was actually a disc-shaped spaceship of approximately three hundred meters in diameter. A ship similar to the one I already had seen once on June 2nd, 1942. And this ship here must indeed already have been in this giant storage hall for centuries or even for millennia, very deep under the Earth and, by my reckoning, at least 3,000 or 4,000 meters below, or to the side and downward, from the [Great] Pyramid of Giza.³

Meier's stealthy tour of the immense beamship hangar below the Giza plateau was enabled by the superior technological means of Asket, deftly employed to allow their invisible bypass of the Bafath guards, operating under strict orders from Kamagol II to kill any trespassers on site.⁴ The covert influence and negative intentions of the Bafath ETs identified through the Plejaren contacts of Swiss amputee Eduard Meier were likewise discussed in the UFO contact case of Professor Hernandez in Cuatla, Mexico which began in 1977.

The Inxtrian ET visitor Elyense shared matching information characterizing this malevolent group as 'Xhumz'. Elyense exposed their strategic contamination of Earth's atmosphere with '*smounr*', a potent fluid medium weaponized by concentration of negative human emotions derived from multitudes of fearful human beings:

"The Xhumz lack sentiments and experience no emotion at all. This is because their scientific ancestors achieved, more than two thousand years ago, the eradication of fear in their minds, for the purpose of which their world would live in optimum, individual circumstances.

"The Xhumz nevertheless achieved the eradication of all sentiment. They deprived themselves of love, of friendship, of benevolence, and finally of all sentiments that could obstruct their power. This was programmed for the civilizations that would follow. In your world emotions of that type predominated. They observed how the hypersensitivity of the individual could be used to develop profound hate, and how the absence of love many times induces not only the suicide of one person, but the annihilation of a whole race...

UFO spraying smounr fluid
Negative thought complex

"They conditioned the Earth human to a mental level, slowly, without recourse to grave confrontations of violence, utilizing products, which, in combination with the atmospheric gases, produced mental modifications in the race. They employed chemical elements in the air, in the waters and in the Earth itself. They cast derivatives of *smounr* (a liquid that can be produced [to store human thoughts by perpetually cycling] in three states: gas, liquid and solid, according to our studies) in the oceans and seas, the rivers, lakes, clouds, etc...

"This promoted degenerative regressions in human life. In your world there are still no scientists who could study this kind of weapon. In this manner, depending of the grade of mental level presented by the human being, they could, favored by the same violence that propitiates this finality, provoke confrontations between the continents.

"The different countries that proceed at the head scientifically will find themselves suddenly before an unusual violence inexplicably provoked there by they themselves, escalated to a level beyond which it could not be returned. Then the Xhumz will attack. The humans of Earth will be too occupied in belligerent confrontations with their neighbors to give much attention to the dangers that will overcome them in space. For when the human of Earth detects any anomaly, it will already be too late...

"If the scientists of your world can unite and analyze point by point all that has been discovered in the laboratories, and advance from there, not only sharing, but amplifying their knowledge –of others, other worlds, other galaxies; not just the Xhumz, who are a little more than 100 light years from your planet, but some far beyond your own Galaxy, will contemplate your world with respect.

"This is the epoch in which they are aiming to come back to this Solar system. They possess weapons unsuspected by your people, possess a technology superior to yours, are more than three thousand years in advance scientifically; you have a world degraded, contaminated, and violent...

"They possess advanced technologies before which you would be devastated. It will require the alliance of your whole planet to repel one attack of the proportion which can be expected. The Xhumz have been dominating your world since the years from 1914, have been proposing that you yourselves annihilate each other, and perhaps when your world is desolated they will come and colonize it. Thus they would increase even more the territory which they dominate."⁵

Despite possessing expert-level knowledge on the subject of nuclear physics, Mexican UFO contactee Professor Hernandez was not able to fully comprehend these unsettling explanations shared by Elyense of Inxtria. The professor struggled to grasp the many disturbing truths being presented to him by an ET visitor.

Many specific details concerning nefarious activities of ET control operations within governments have been directly corroborated by the Siberian sage Anastasia,⁶ who visited an 'invasion center' on the homeworld of an *emotionless* scientist named 'Arkaan'. Although Anastasia did not identify this group directly by name, the overwhelming synchronicity of evidence confirms these aggressors as the Bafath. Their categorization by the Inxtrians as 'Xhumz' references their negative (self-centered) spiritual orientation; being devoid of emotion.

New developments in the field of phonon resonance transmutation allow us to define the profusion of low-energy nuclear reactions that perpetually vitalize all living organisms, fluctuating in perfect synchrony with the shifting bioelectrical influences of planetary infrasound resonance. Although the fundamental mechanisms facilitating the concentration of human thought within biophoton fields is not yet understood, the essential role of specific atomic reactions can now be discerned within a concise mathematical framework for the first time.

The cursory explanation of weaponized 'smoun' fluid shared by the Inxtrian ET Elyense—described as a fluid system sustaining a *cyclical reaction involving all three states of matter*—exactly matches the highly detailed descriptions given by Anastasia of fluid preparations utilized by all members of the Bafath society for multiple advanced purposes. Her careful observations of scientific procedures executed on the Bafath homeworld reveal specialized use of glowing fluid concoctions for purposes of procreation and destruction.

Anastasia and Vladimir's astral viewing of Arkaan, a leading scientist among the Bafath, identified the use of a special type of resonant transmutation glassware and saline biophotonic transmutation fluid for controlled reproduction. Through artificial means, specialized genetic manipulation of every fetus achieves the desired collective goal of reducing their civilization to self-service as emotionless, negatively oriented automatons:

We found ourselves overlooking one of the cities or settlements of the huge planet. Our aerial view afforded us the following picture: As far as the eye could see, the whole populated area consisted of a great many cylindrical installations, something like our modern skyscrapers, set in a large number of circles.

In the center of each circle were low-rise structures somewhat reminiscent of trees on Earth—even their sensor-leaves were green. Anastasia confirmed that these artificial structures draw up from the ground all the components of substances needed for sustenance, which are then dispatched through special pipes into the homes of every inhabitant of this particular world. Not only that but they maintain the requisite atmosphere for the planet...

We found ourselves almost at the very top of one of the cylindrical skyscrapers. There were absolutely no windows in this alien apartment block. The circular walls were marked off into dull-colored squares. Near the bottom of each square was a raisable door—the kind you might find on our modern garages. Now and then one of the doors would open and out would come a small flying machine similar to the one we had seen near the automated factory, and fly off on its own.

It turns out there was a small garage for one of these machines located below each apartment in the high-rise. There were no lifts or doors in the building. Each flat had its own entrance directly from the garage. And, as it turned out, every inhabitant of the planet acquired an apartment like this once he reached a certain age...

Upon finding ourselves in the brown-haired man's flat just after he arrived home, my initial impression was one of surprise at its simplicity and apparent lack of amenities. The room, approximately thirty square meters in area, was completely barren. It wasn't just that there were no windows or partitions—there wasn't even the barest modicum of furniture. The smooth, pale walls bore not a single painting or shelf by way of decoration...

Indeed, no sooner had the brown-haired alien come up from his garage below, than the ceiling and walls of the room began to glow with a soft light. Arkaan turned to face the wall next to the entrance, placed the palm of his hand on the surface and uttered a sound. A panel on the wall lit up... He went on giving voice commands, and the following events ensued in the room.

From a section of the wall all at once an armchair began to inflate. Then beside the chair another little niche opened, from which a small table emerged, along with some kind of semi-transparent container resembling a laboratory flask. On the opposite wall of the room a large screen lit up, about one-and-a-half to two meters in diagonal. The screen showed a beautiful woman in a slinky bodysuit seated in a comfortable chair.

The woman was holding a container in her hands similar to the one on the table beside Arkaan. The image of the woman on the screen was three-dimensional, and much sharper than our TV sets. It seemed as though she were not on a screen, but sitting there in the room. Anastasia explained that Arkaan and the woman sitting opposite him were forming a child together.

“The inhabitants of this planet do not have sufficient strength of feeling to enter into sexual relations like people on Earth. Outwardly their bodies are no different, but the absence of feelings does not allow them to produce offspring the way people do on Earth. It is their own cells and hormones that are contained in the test-tubes that you see. Men and women visualize what they would like their future child to be like. They mentally instill in him the information they themselves contain, and discuss his future activity. This process lasts approximately 3 years in Earth time.

“Once they determine that the process of the child’s formation is complete, they join the contents of the 2 containers together in a special laboratory, the child is produced and raised in a special nursery school until he comes of age. Then as a mature member of the community he is offered an apartment and assigned to the personal roster of one of the work groups.”

Arkaan alternated his gaze between the woman on the screen and the liquid in the little sealed container. All at once the wall screen dimmed, but the alien remained seated in his chair, his eyes fixed on the container on the table in front of him holding a particle of his future child... Arkaan slept clasping the little container in his hands to his chest.⁷

Anastasia’s astute explanations of *in vitro* procreation technologies utilized on Arkaan’s planet are made comprehensible by recent developments in *phonon transfer alchemy*. Vital forces are provided for gametes placed in these semi-transparent glass containers by the positronic emissions of resonant transmutation reactions induced by metallic nanoparticles suspended within the glass matrix. These include several percent nickel content, for conducting electron emissions of positronic fluids into EM fields encompassing the vessel.

This conclusion is informed by the high nickel content of the Tunguska silicon grail, which does not function as a phonon transfer agent, but instead acts as an electrical conductor in the transmutation vessels. *In vitro* procreation processes used on Arkaan’s planet require special resonant temperature conditions for the preparation of gametes. The vessels are maintained at body temperature by invisible infrared light beams emitted from a nearby wall panel –a fact not explained by Anastasia due to Vladimir’s limited understanding.

The procreation flasks of Arkaan’s people maintain their gametes at ~37.8°C for extended durations, allowing for a 3-year process for *instilling thought complexes within the positronic fluid medium* –those thoughts of the two parents pertaining specifically to the desired characteristics of the offspring they are creating together.

High biophysics knowledge demonstrated through the technological achievements and correspondingly complex mental activities of Arkaan's people reflects their total dependence on technical means for accomplishing biological acts that arise naturally out of emotional impulses influenced by sex hormones. Selective removal of emotional factors by preventive genetic manipulation has left Arkaan's society without any possibility of natural intercourse afforded by emotional interaction, leaving their continuance in question:

"They have already learnt to gather the energy human thoughts and feelings can produce into a unified complex and are proud of that achievement.

"Look, and you will see in front of that group of aliens there is a container of glowing liquid, which is being transformed back and forth between gaseous, liquid and solid states. They have no weapon stronger than what is concentrated in that small container. Later they will distribute its whole contents into a whole lot of small, shallow containers. One of the sides of the container will act as a special reflector. Each one of them will wear a similar device around his neck in the form of a medallion.

"All the aliens you see sitting in front of you are wearing such devices right now. When a ray from this medallion is directed at a Man, it may provoke in him feelings of fear, reverence or excitement. And it can paralyze not only a person's will, but also his consciousness and his body. This ray contains thoughts of a multitude of people...

"In the container standing in front of you there is enough energy to overcome approximately three quarters of all the minds on the Earth and to take over people's feelings. *That* they consider to be more than enough. Then the whole Earthly civilization will begin to pay them obeisance. And their power will increase."⁸

The highly advanced *in vitro* procreation procedures –facilitating genetic manipulation of an entire civilization to be entirely devoid of emotion– affords their complete invulnerability to the potent radiations of negative emotional complexes concentrated within the glowing positronic fluid medium (illustrated opposite, above).

The process of eliciting, collecting and concentrating negative emotions from multitudes of Earth humans appears to be closely aligned with the serial UFO plasma beam abduction activities of the Baal Consortium, comprised of various giant, predatory humanoids species as well as diminutive, man-eating gnomes.

The vampiric fixation of serial cannibals, whether of Earthly human or ET origin, draws physical sustenance from blood in addition to an etheric or negative spiritual nourishment supplied only when extracting 'the essence' of the victim's vital energy, just as depicted in the visionary children's film *'The Dark Crystal'* (1982).

In addition to highly controlled *in vitro* procreation methods, the Bafath civilization has further weaponized their knowledge of the positronic fluid medium, thereby contravening the Holy Law. Waging psychic warfare through negative psychic radiations –while altering themselves to be immune to its effects– has firmly fixed their spiritual orientation in alignment with destructive forces and bringing their continuance into question.

The weak biophoton emission of human skin was first identified by this author in 2013 as a resonant atomic conversion cascade involving rapid transmutation of dissolved sodium atoms in the presence of oxygen at 37.8°C, through brief gas phases as neon and argon atoms before recombination as potassium atoms:

[French biophysicist C.L.] Kervran's report [revealing the sodium-potassium imbalance of human excreta] was published in 1963, presenting carefully drawn conclusions that comprised the [preliminary] identification of resonant nuclear transmutations occurring in the human body...

Subsequent attempts to replicate this reaction in vitro were successful, and progressed to more complex experimental setups in Japanese universities, where the reaction was replicated under spectrographic observation by various other researchers using sodium vapor (Torii, Sakurazawa, Odagiri, 1963; Ohsawa, Kushi, 1964). The spectral emission lines of potassium consistently appeared in the pure sodium vapor.

Time and time again, this reliable experiment revealed the same startling result --sodium vapor heated at low temperatures converted into potassium at a stable rate that increased with electrical input to the system. Neon and argon gases added to the sodium/oxygen reaction were found to increase the potassium output, for unknown reasons. Phonon resonance calculations determine precise temperature thresholds that induce atomic conversion cascade chains involving neon and argon gases:

Phonon frequency matching of oxygen heated to 37.8°C with hydrogen at rest (20°C) induces conversion of sodium atoms into neon isotopes (Ne^{22} , Ne^{21} , Ne^{20}). Phonon resonance of Ne^{20} atoms at 37.7°C with stable argon isotope (Ar^{40}) induces resonant fusion of two neon gas atoms into a single argon gas atom. O/H resonance at 37.8°C then induces fission of argon atoms, yielding hydrogen and potassium (K^{39}).⁹

These surprising determinations represent the only viable explanation for the biophotonic glow of human blood and skin, and the measurable luminosity of our eyes. Biophotons are emitted from nuclear reactions induced by phonon frequency matching of O¹⁶ with H¹ and Ne²⁰ with Ar⁴⁰ (below) near body temperature at 37.8°C. Human radiance becomes amplified under the enhanced bioelectrical conditions generated within the piezoelectric stone chambers of Atlantean pyramids and megalithic temples throughout the world.

$$\text{Ne}^{20} \text{ Phonon Resonance (Hz/Cm)} = \sqrt[3]{\frac{0.0009 \times (6.0221 \times 10^{23})}{19.99244}} = 3,004,057 \text{ Hz}$$

$$\text{Ar}^{40} \text{ Phonon Resonance (Hz/Cm)} = \sqrt[3]{\frac{0.001785 \times (6.0221 \times 10^{23})}{39.96238}} = 2,996,252 \text{ Hz}$$

$$\text{Resonant Temperature (}^\circ\text{C)} = \frac{\text{Ln} \left(\frac{f(3,004,057)}{f(2,996,252)} \right)}{0.0001468} + 20 = 37.7 \text{ }^\circ\text{C}$$

Starting Element: **Neon** (₁₀Ne²⁰)
 Natural Abundance: **90.48%**
 Atomic Mass: **19.99244**
 Density (grams/cm³): **0.0009**
 Exp. Coefficient: **0.0001468**

Target Element: **Argon** (₁₈Ar⁴⁰)
 Natural Abundance: **99.60%**
 Atomic Mass: **39.96238**
 Density (grams/cm³): **0.001785**
 Exp. Coefficient: **0.0001231**

The Essene Master Jesinavarah spoke directly of resonant transmutation as the Fire of Life. “Master, where is the fire of life?” asked some of them. “In you, in your blood, in your bodies.”¹⁰ Clearly, the developments of phonon resonance alchemy confirm resonant atomic transmutation reactions perpetuated in human blood release hydrogen atoms that enable an adept such as the Buddha to survive without drinking any water:

The evolution of red-blooded mammals has specifically exploited the phonon frequency interactions of gases and metals in the blood for producing excited electron states that have yet to be fully understood. Phonon vibration of individual oxygen atoms bound to iron atoms in hemoglobin enables the resonant atomic recombination process by instilling the target frequency of daughter elements.

Quite surprisingly, the atomic diameters of O and H atoms are relatively similar despite their difference in atomic mass, allowing for frequency matching possibilities near room temperature. As oxygen atoms are driven through repeating heat fluctuations by cyclical movement through the human body, frequency matching with hydrogen atoms occurs in the warmer areas before slowly dropping in the extremities. The resonant frequency of hydrogen (H¹) in its rest state is 3,773,180 Hz, according to the element's atomic diameter at 20°C. Oxygen isotope (O¹⁶) resonates at this same frequency when heated to 37.8°C:

$$\text{O}^{16} \text{ Phonon Resonance (Hz/Cm)} = \sqrt[3]{\frac{0.001429 \times (6.0221 \times 10^{23})}{15.99491}} = 3,775,138 \text{ Hz}$$

$$\text{H}^1 \text{ Phonon Resonance (Hz/Cm)} = \sqrt[3]{\frac{0.0000899 \times (6.0221 \times 10^{23})}{1.007825037}} = 3,773,180 \text{ Hz}$$

$$\text{Resonant Temperature (}^\circ\text{C)} = \frac{\text{Ln} \left(\frac{f(3,775,138)}{f(3,773,180)} \right)}{0.0000291} + 20 = 37.8 \text{ }^\circ\text{C}$$

Starting Element: **Oxygen** (₈O¹⁶)
 Natural Abundance: **99.762%**
 Atomic Mass: **15.99491**
 Density (grams/cm³): **0.001429**
 Exp. Coefficient: **0.0000291**

Target Element: **Hydrogen** (₁H¹)
 Natural Abundance: **99.985%**
 Atomic Mass: **1.007825037**
 Density (grams/cm³): **0.0000899**
 Exp. Coefficient: **0.0000366**

Blood circulating within the heart and large arteries maintains temperature near 38.0°C, slightly elevated above average core body temperature near 37.0°C. This significant variance of blood from the mean human body temperature induces rhythmic thermal fluctuations in blood cells according to their cyclical transport from the warm heart to the slightly cooler extremities and skin capillaries. *During circulation, fission of iron atoms releases hydrogen atoms by phonon induction of bound oxygen atoms at 37.8°C.*¹¹

These conclusions suggest the glowing positronic fluid medium of the Bafath replicates the biophotonic emission of nuclear reactions occurring within the human epidermis. In vitro replication of this cyclical biophotonic reaction within a fluid medium maintained at 37.8°C is enabled by the balancing activity of an inverse reaction whereby potassium atoms are resonantly converted back into sodium atoms. This inverse reaction is easily achieved by applying the requisite phonon transfer agent to induce targeted reactions.

The dissolution of ionic compounds such as salt to form saline solution allows free motion of individual atoms within the fluid medium. Polarized H₂O molecules cluster around positive and negative hydrated ions suspended in solution, forming clathrates. Positively charged sodium (Na²³) cations attract oxygen (O¹⁶) atoms, whereas negatively charged chlorine (Cl³⁵, Cl³⁷) anions attract hydrogen (H¹) atoms (above). Phonon vibrations of lithium isotope (Li⁷) may induce conversion of potassium (K³⁹) into unstable magnesium (Mg²³):

The phonon frequency of lithium isotope (Li⁷) at rest (20°C) is 35,747,397 Hz, according to the atom's exact diameter at 20°C, facilitating resonant nuclear reactions targeting magnesium *at human body temperature*. The latest atomic data for the lithium transfer isotope and unstable magnesium target isotope are provided, defining the degree of accuracy for each respective phonon resonance calculation (highlighted in blue). The phonon frequency of lithium transfer isotope (Li⁷) matches those of the target isotope (Mg²³) at 37.6°C:

$$\text{Li}^7 \text{ Phonon Resonance (Hz/Cm)} = \sqrt[3]{\frac{0.5322 \times (6.0221 \times 10^{23})}{7.01600}} = 35,747,397 \text{ Hz}$$

$$\text{Mg}^{23} \text{ Phonon Resonance (Hz/Cm)} = \sqrt[3]{\frac{1.74 \times (6.0221 \times 10^{23})}{22.99412}} = 35,718,521 \text{ Hz}$$

$$\text{Resonant Temperature (}^\circ\text{C)} = \frac{\text{Ln} \left(\frac{f(35,747,397)}{f(35,718,521)} \right)}{0.000046} + 20 = 37.6 \text{ }^\circ\text{C}$$

Starting Element: **Lithium** (₃Li⁷)
 Natural Abundance: **92.2%**
 Atomic Mass: **7.01600**
 Density (grams/cm³): **0.5322**
 Exp. Coefficient: **0.000046**

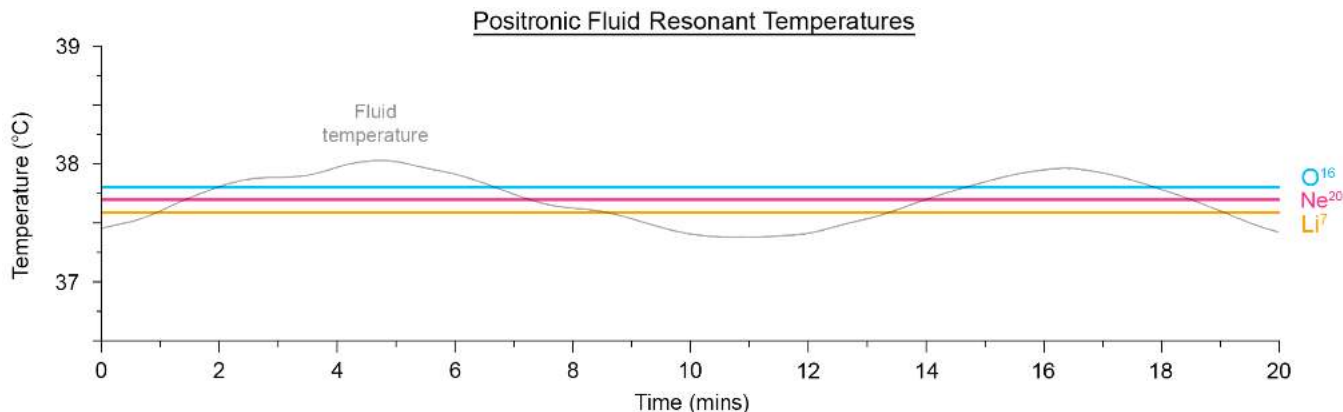

Target Element: **Magnesium** (₁₂Mg²³)
 Natural Abundance: **0%**
 Atomic Mass: **22.99412**
 Density (grams/cm³): **1.74**
 Exp. Coefficient: **0.0000248**

The product of this resonant fission reaction is not found in nature, possessing a brief half-life of several seconds, unstable magnesium (Mg²³) isotope undergoes β^+ decay for a brief 11.3-second emission period before forming stable sodium (Na²³) –releasing an excess 0.00435 AU as neutrinos, photons and electrons.

Reversion of potassium back to sodium only occurs in the presence of lithium as a phonon transfer agent. Lithium exhibits many properties that are similar to the more common alkali metals sodium and potassium. In many respects, it also shows similarities to the elements of the alkaline earth group, especially *magnesium*. Lithium-silicate glass products incorporating lithium carbonate are available for various scientific applications:

Specific optical products, i.e. for spectroscopy, use lithium-containing additives in the glass composition. Lithia (lithium oxide, released from lithium carbonate) is also used in container glass, flat glass, pharmaceutical glass, specialty glass, and fiberglass... The addition of lithia increases the glass melt rate, lowers the viscosity and the melt temperature... At the same time, the mechanical and optical properties of the glass are improved, as lithia contributes to the strength, durability and brilliance of the glass.¹²

Use of lithia-glass containers facilitates induction of resonant atomic transmutations in saline solutions at temperatures fluctuating from 37.5-38°C, whereby phonon frequency matching occurs at 3 distinct thresholds:

The proximity of phonon frequency matching thresholds instigates a rapid sequence of resonant nuclear recombinations in cascade, as dissolved atoms undergo perpetual oscillation between solid and gas states in the liquid medium. *In vitro* isolation of this biphotonic reaction cycle ~37.8°C confirms reaction cascades perpetuated in human blood in the presence of lithium, for which Ayurvedic temple practices were designed:

"The supreme accomplishment of human beings," he said, "is to attain that level of attention while retaining the life-force, without becoming a disembodied awareness moving like a flicker of light..." [Yaqui Elder Don Juan then explained that]... the glow produced by a state of total awareness... is *seen* as a burst of incandescence in the entire luminous egg. It is an explosion of light of such a magnitude that the boundaries of the shell are diffused and the inside emanations extend themselves beyond anything imaginable...

"Certainly [these attainments represent special cases]. They happen only to seers. No other living men or any other living creatures brighten up like that. Seers who deliberately attain total awareness are a sight to behold. That is the moment when they burn from within. The fire from within consumes them. And in full awareness they fuse themselves to the emanations at large, and glide into eternity."¹³

Ancient Atlantean temples flowed with celestial waters containing ionic lithium for *kindling the fire that burns from within*. Many beneficial effects of drinking ionic lithium have been observed in the human brain:

Clinicians have long used lithium to treat manic depression. They have also observed that lithium causes granulocytosis and lymphopenia while it enhances immunological activities of monocytes and lymphocytes. In fact, clinicians have long used lithium to treat granulocytopenia resulting from radiation and chemotherapy, to boost immunoglobulins after vaccination, and to enhance natural killer activity. Recent studies revealed a mechanism that ties together these disparate effects of lithium.

Lithium acts through multiple pathways to inhibit glycogen synthetase kinase-3 (GSK-3). This enzyme phosphorylates and inhibits nuclear factors that turn on cell growth and protection programs, including the nuclear factor of activated T cells (NFAT) and WNT/catenin. In animals, lithium upregulates neurotrophins, including brain-derived neurotrophic factor (BDNF), nerve growth factor, neurotrophin-3 (NT3), as well as receptors to these growth factors in brain. Lithium also stimulates proliferation of stem cells, including bone marrow and neural stem cells in the subventricular zone, striatum, and forebrain. The stimulation of endogenous neural stem cells may explain why lithium increases brain cell density and volume in patients with bipolar disorders.

Lithium also increases brain concentrations of the neuronal markers n-acetyl-aspartate and myoinositol. Lithium also remarkably protects neurons against glutamate, seizures, and apoptosis due to a wide variety of neurotoxins. The effective dose range for lithium is 0.6-1.0 mM in serum and >1.5 mM may be toxic. Serum lithium levels of 1.5-2.0 mM may have mild and reversible toxic effects on kidney, liver, heart, and glands. Serum levels of >2 mM may be associated with neurological symptoms, including cerebellar dysfunction. Prolonged lithium intoxication >2 mM can cause permanent brain damage. Lithium has low mutagenic and carcinogenic risk.

Lithium is still the most effective therapy for depression. It 'cures' a third of patients with manic depression, improves the lives of about a third, and is ineffective in about a third... Lithium has been reported to be beneficial in animal models of brain injury, stroke, Alzheimer's, Huntington's, and Parkinson's diseases, amyotrophic lateral sclerosis (ALS), spinal cord injury, and other conditions. Clinical trials assessing the effects of lithium are under way. A recent clinical trial suggests that lithium stops the progression of ALS.¹⁴

The widespread beneficial effects of lithium therapy continue to amaze researchers, and appear to involve a significant increase in the rate of cellular regeneration by which the brain is able to recover from injury and disease of various kinds. These remarkable findings definitively indicate the enhanced activity of a systemic cellular regeneration mechanism that has not been identified by investigators of the subject.

Advances in brain imaging techniques have allowed the discernment of selective ion deposition patterns across various brain regions over the duration of multi-week studies involving dietary lithium uptake. Rodent studies have identified semi-selective uptake of lithium in areas of the brain associated with neurogenesis:

The here employed ToF-SIMS approach facilitated to delineate anatomical regions of interest based on their specific chemical profile (ROI). Here e.g. lithium and choline were found predominantly in the gray matter..., whereas cholesterol localized in the white matter... PCA-based image analysis showed that lithium followed a spatial rather than a time-dependent pattern of distribution, in such that it varied in the subventricular zone but remained elevated in other neurogenic areas compared to basal ganglia, cerebellum and cortex... This selective uptake of lithium, as indicated by ToF-SIMS ion imaging, was further confirmed by absolute ex vivo quantification of lithium using ICP-AES on tissue extracts from dissected brain regions...

A reason for lithium localizing to regions with higher cellular density could be that lithium uptake occurs chiefly at the cellular body level rather than at the axonal level as previous studies also hypothesized. Overall, our findings contribute to a better understanding of lithium accumulation in the developing brain, providing not only a qualitative spatial lithium distribution as judged by ToF-SIMS but also supporting this with the more precise quantitative approach of ICP-AES. Based on our ICP-AES quantification of different ROIs, we estimate that brain lithium concentration would be in the range of 0.817–0.049 mmol/L, if we assume a tissue specific density of 1.04 g/ml as previously observed in a rodent study.

Interestingly, this accumulation of lithium in neurogenic regions may be relevant for the positive effects observed on neurogenesis and other molecular processes relying on the generation and integration of new neurons in a pre-existing network. Indeed, further investigation of the direct effects of lithium on neurogenesis revealed that a continuous treatment led to a significant, 1.34-fold increase in proliferation, as judged by quantification of Ki67⁺ cells in the GCL of the DG... However, no direct effect of lithium was observed on neural differentiation of newly born cells in the DG network, as judged by quantification of DCX⁺ cells...¹⁵

This significant 134% increase in proliferation of new neurons resulting from continuous lithium treatment in is indicated as an isotope-dependent effect of Li⁷; as demonstrated by the contrasting effect of Li⁶ versus Li⁷ on mothering behavior in rats.¹⁶ Excessive dietary lithium levels employed in these studies appear to have inadvertently negated any potential benefits of Li⁷ that have been observed in similar, more recent studies.

The present findings of phonon transfer alchemy concisely identify neurogenic benefits of lithium isotope Li⁷ uptake as the result of resonant transmutation reaction cascades induced by phonon frequency matching perpetuated by the exact thermoregulation temperature regime maintained by the human body near 37.8°C.

The cognitive benefits of lithium sequestering in the brain are complimented by a broad range of cleansing activities experienced throughout various systems of the body, through processes not yet identified. Trance medium Edgar Cayce prescribed taking lithium in drinking water for cleansing the kidneys and intestinal tract:

We would not take any water unless it carried either a small quantity of lithia, elm bark, or Saffron or the conditions that make for the correcting of toxic forces along the flow of all the intestinal tract, from the mouth throughout the alimentary canal... This would be the first precaution, for –while it is, of course, slow acting it will make for a cleansing of the kidneys, a better activity through the alimentary canal, clear those tendencies for the poisons to accumulate through the lymph and emunctory circulation, and overcome these tendencies for toxic forces to arise in the body that affects the body throughout. [Reading 840-1]

At all times drink plenty of water. Occasionally, –say once a week,– put a lithia tablet in a glass of water and drink it. This will stimulate better circulation and set up better drainage through the whole of the alimentary canal, especially as related to the hepatic circulation; that is, the circulation between the liver, the kidneys, and the flow through the alimentary areas of the body. [Reading 2518-1]

Or, once in two to three weeks a lithia tablet in the water will prevent any sediment from such activities causing distresses or weaknesses... [–also requiring] adjustments to prevent any of the centers or ganglia along the cerebrospinal system from becoming clogged or non-active, thus allowing some functioning of the organs to become clogged by their non-activity through lack of impulse or coordination with other portions of body. [Reading 2780-2]

The lithia adds to the efficiency of the active forces necessary through the lower hepatic circulation, clarifying and relieving kidneys from the distresses as would be caused by and under active principle. [Reading 3717-2]

Also, lithia, to act on the urinary tract... [Reading 4824-1]

Potent blood-building and hepatic cleansing activities of drinking lithium-infused waters were described by Cayce in dozens of psychic readings given over decades. The combination of beneficial activities attributed to ionic lithium within the body is simply astonishing, and have not yet been fully understood by investigators due to widespread ignorance of the resonant atomic mechanisms driving the *qi meridian system* responsible for the proliferation and transport of stem cells to facilitate regeneration throughout the body.

While the complete mechanism by which lithium induces stem-cell growth has eluded all prior detection, the process is known to involve regulation by WNT/ β -catenin signaling. The conserved WNT/ β -Catenin pathway regulates stem cell pluripotency and cell fate decisions during development.¹⁷ The present findings confirm positron emission from unstable magnesium (Mg^{23}) stimulates stem-cell production by the qi meridian.

Phonon vibrations of ionic lithium fluctuating around 37.6°C in the human bloodstream instigate the cyclical fission/fusion of dissolved sodium atoms, greatly increasing the intensity of biophoton emission driving regenerative processes of the qi meridians. This activity becomes further enhanced or ‘stepped-up’ by the roaring infrasound and resulting bioelectrical influence of pyramids and megalithic temples worldwide. For this specific purpose, piezoelectric stone chambers were constructed in a global mandala pattern by the Atlantean civilization, for transducing planetary acoustic energy into high-intensity EM fields at nodal sites.¹⁸

My intuitive development of the present phonon alchemy biophysics research has been greatly accelerated by the drinking of Soma elixir, enhancing access to the Akashic psychosphere of Earth. The presently unfolding revelation of the hidden quantum functions of positronic fluid media –whether induced in Soma electrum colloids or ‘smounr’ saline solutions– reestablishes the fundamental Ayurvedic knowledge of Atlantean high civilization; elevating the state of atomic knowledge of humanity on Earth by thousands of years, according to the wise Inxtrian ET visitor Elyense.

These research triumphs integrate the Divine guidance of the Higher-self, reflecting the fulfillment of my given name. The ancient Greek meaning of ‘Alexandros’ is: “Protector of Man”. A Paleo-Sanskrit translation of my full name presents 7 hieroglyphs,¹⁹ reading: **al ex an der put ne y**, meaning “ability beyond, (of the) Breath reaching; purification neigh, (of the) imperishable.” The purification of Earth is assured by the fast approaching Betelgeuse supernova blastwave.²⁰

References to highly unusual circumstances surrounding my Unity Field studies were made by Laura Peppard during a psychic Aura Reading for this author on March 19, 2008, which identified ET surveillance of my phonon transfer alchemy research activities for immoral purposes involving application on other planets by a negatively oriented ‘peer’:

There’s another present here that you’re working to find [brief pause]. Like maybe you could say it’s the Lord of Karma, is one sense I get from it... [H]ere’s this little thing that looks like... a wormhole. It’s like if I look through it, then it comes up, maybe let’s say on another planet, I don’t know, another place, and there’s somebody else reading these past lives –accessing your information, say. So, now my conclusion is that they’re probably your past lives, but that somebody else is reading them, you know, like we would watch TV. Or, those experiences are available, so, you’re like an open book...

You know, normally whatever energy you run in your space that’s creating consequences in the world, and you’re getting those consequences and learning and growing from it, and that’s generally how people change and grow. This is in a sense not letting that happen, as I see in the layers. Kind of more like you’re on a mountaintop, or protected? I’m feeling another presence in this layer too... Somebody else’s energy is there –jealous of your ability, but I don’t think necessarily a physical person [*here on this planet*].

You know, I’m just getting these weird things I don’t usually see in readings, but it’s kind of like this person... feels like a boy, kind of a thing... but a peer. It’s like taking your communication, but like, to another planet and using it, but it’s yours. But... he’s presenting it as his. You know, taking it from you, but it’s not in this world... [The energy of this being–] it’s smoky and goopy at the same time, and it’s kind of gray and mustard, too.²¹

'Your brother tree' granting life
Constellation of Orion, the Hunter

After the reading, Laura remarked that she had never known of a reincarnation case such as mine. Past life information pertaining to technological knowledge possessed by Nikola Tesla, Jesinavarah of Herai, Esdraz, Ddao, Ajax and their many predecessors is stored within the subconscious mind, informing my own intuitive rediscovery of phonon transfer alchemy processes. According to Laura Peppard's psychic reading, this past life information is being remotely accessed by ET competitors from Orion who seek to gain control over humanity here on planet Earth. While *jealousy* is certainly an emotional response that these ET aggressors do not presently experience, their collective drive to expand their domain of control over other worlds including Earth finds its roots in the severe emotional confusion of those ancestors who set genetic protocols to eradicate all feeling in their descendents.

The fair-skinned Bafath humanoids and their giant demon hoards of the Baal ET Consortium occupy multiple worlds and planetoid bases within the Orion sector of our galaxy. In psychic transmissions received by Laura Knight-Jadczyk on September 24, 1995, the Cassiopaeon '6th-density thought-forms' shared an overview of the ancient, indigenous origin of humanoid populations in the local region of the Orion Federation:

A: In this part of your 3rd and 4th density Universe, specifically your "galaxy" it is the region known as Orion that is the one and only indigenous home of human type beings... reflect on this! Indigenous home base, [but] not [the] sole locator. What you are most in need of review of is the accurate profile of "alien" data.

Q: (RC) I thought that humans originated in Lyra and then a war broke out there and they ended up in Orion?

A: Lyra is not inhabited. There have been homes in all places, but some were/are transitory, and some are not. Pay attention to Orion! This is your ancestral home, and your eventual destination. Here is the absolutely accurately accurate profile of Orion to follow: This is the most heavily populated region of your Milky Way galaxy!

This is a region that extends across 3rd and 4th density space for a distance as vast as the distance between your locator and it. There are 3,444 inhabited "worlds" in this region. Some are planets as you know them. Some are artificially constructed planetoids. Some are floating space barges. And some are "satellites". There are primary homes, traveling stations and incubator laboratories all in 2nd, 3rd and 4th densities.

There are overseer zones in 5th and 6th densities. Approximately one half is STO and one half is STS. Together, along with many other colonies located elsewhere, this is called, in translation, Orion Federation. Orions created grays in 5 varieties, as cybergenetic beings, and installed them on Zeta Reticuli 1, 2, 3, and 4, as well as on 2 planets orbiting Barnard's Star. The Reptilians also inhabit 6 planets in the Orion region in 4th density, and are owned by the Orion STS as slaves, and, in some cases, pets!!! The name "Orion" is the actual native name, and was brought to earth directly. Study the legend of the "god" of Orion for parallels.

Q: (L) Are the Orion STS the infamous red-headed Nordic aliens? A: Yes, and all other humanoid combinations.²²

Paleo-Sanskrit artifacts
Caria, Italy - 13,000bp

These revelations given by the Cs reveal the unique locus of origin of human-like life forms in the Orion region of our Milky Way Galaxy. Complex information shared through the Cassiopaea transmissions over decades of regular sessions indicates the deleterious effects of all forms of atmospheric contamination on Earth will be reversed by the impact of the Betelgeuse supernova, heralding the arrival of many high ET civilizations inhabiting radiant worlds of our Milky Way Galaxy *to assist us through the ascension of Earth.*

Atlantean high knowledge of the symbiotic relationship that exists between the human being and the tree was extolled in votive passages marked on sacred items. Texts adorning artifacts excavated in Caria, Italy dating to >13,000bp praise the healing infrasonic benefits of giant trees (above). A geopolymer sandstone portrait wearing a psychoacoustic helmet is inscribed with the rhyming mantra: **raua kar Adri raua kar adhi** , meaning “roaring works (of the) Tree, roaring works delivering.” A small terracotta figurine of a woman was inscribed with hieroglyphic text reading: **ma-as si Adri ra ma** , meaning “For (it) is your Tree, granting (it) is.”²³

Thao. Aarioc and other *Masters in Nature* of the golden planet of Thiaoouba will be among the many great teachers to grace us with their wisdom, guiding the co-creation of an Earthly garden in resonance with the Holy Law giving rise to the Tree of Life. Creational lessons shared by the Prince of Peace are being given anew; guiding our restoration of the balance of material and spiritual knowledge of humanity on Earth.

Resonant atmospheric conditions on Earth will become observable as red auroras worldwide, elevating human consciousness and awareness through amplification of planetary infrasound stoking *the Fire of Life*:

For all the manifold gifts of Life, we do worship the Fire of Life, and the Holy Light of the Heavenly Order... The most beneficial and most helpful, the Fire of Life! The most supporting, the most bountiful, that Fire which is the House of the Lord!... A sanctuary of the Holy Spirit is the body in which the Fire of Life doth burn with eternal Light.²⁴
